## POT-IN-POT SYSTEMS

Trade Size	Approx. Caliper	Socket Pot	Liner Pot
#7	3/4"-1"	GL2800	EG2800/2800CU
#10	1"	GL4000	EG4000
#15	1 1/4"-2"	GL6900	EG6900/6900BXL
#25	2"-2 1/2"	GL10000	EG10000/10000BXL
#45	3"	18000CL	18000CL

The driving force for the design of the AGS – the Above Ground System for Pot-in-Pot – versatility.

The spacing of the socket pots and the configuration are easily modified or completely changed to accommodate varying crops and growing cycles.

Simple to install, just place on the ground, or pavement or clay. Surround with a cooling media and arrange the watering system.

Grip-Lip - AGS	Use Liner	Trade Size	Top Dia.	Bottom Dia.	Height	Tower	Stack
AGS 2800	2800 Series	#7	15 1/4"	19 1/2"	12 1/2"	144	18
AGS 6900	6900 Series	#15	17 1/4"	22 3/4"	17 1/4"	108	12

Another application for the AGS socket pot, retail presentation. The crop stands, reducing damage and air circulation around the liner area encourages more consistent temperatures.

# INJECTION MOLDED

- Strong and rigid
- Tier stacking
- Tag slots available on some sizes
- Available in color for additional fee
- Label, hot stamp and printing compatible

# PRINTING, HOT-STAMPING & COLORS

Branding moves products and NSI is your branding expert. We offer our blow molded, thermoformed and injection molded containers in many standard colors or select a custom color to meet your marketing requirements. Insure your customers knows you year-after-year by developing that recognized brand.

Our weather-tested and customer-proven inks can be printed on your color container with your specific design in two colors in trade sizes from #1 through #7. Need a container larger than a #7? NSI offers a one color hot-stamp option to imprint your logo multiple times around the container.

Our graphics department will even render your design before the manufacturing process to insure your satisfaction. You pick the colors, you develop the design and NSI will produce your branded container.

Do you also need barcode labeling on your containers? NSI can be your source using water, chemical and smudge resistant labels.

When your company requires that branded appearance, let NSI work with you to make it happen. Contact your Regional Sales Manager to discuss your needs.

# LARGE VACUUM FORMED

## GREEN: More Than the Color of Our Logo.

Nursery Supplies, Inc has been the innovator in new product designs and new material used to manufacture horticultural containers for over fifty years. Since the beginning "green" was more than just the color of the Nursery Supplies' logo, it was the philosophy from the start of our business. That philosophy of being a 'good neighbor' to our environment through recycling continues today.

Historically, Nursery Supplies, Inc. has been a leader in the recycling area. Presently, NSI is looking to 'go greener' through a three-step process using recycled materials. First, NSI is increasing the percentage of post-consumer and post-industrial regrind and reprocessed material in its containers. We have increased our recycled content up to 100% in all three manufacturing processes, blow-molding, injection-molding and thermo-forming of the pot material (excluding color and additives). With the increase in use of recycled material, NSI has increased its testing of incoming materials. Each load of material is thoroughly inspected and sample material from each load is run through a vigorous testing regime. The purpose of the testing is to verify properties and identify contaminants to insure quality material for manufacturing. As a final verification, NSI is evaluating finished products to insure the highest quality containers are still being produced with the recycled resins. Testing of mechanical properties as well as impact properties is critical to the overall quality of the container. Atmospheric testing is also done to evaluate the effect of sunlight and temperature on the finished product. Our customers expect and NSI has delivered the highest quality containers in the industry, still offering a one-year quality guarantee.

As Nursery Supplies, Inc. looks to the future, "going greener still" is a vital element of the vision for the long-term success of our company. Continuing and expanding the use of recycled resins is only one-step in this process. NSI continues to investigate ways to increase the content of recycled materials in its containers by testing additives made with recycled resins. Color additives and fillers all contain various amounts of plastic resin. If these carriers can be converted to recycled material, the overall recycled content in every NSI container will increase. Also, new sources of bio-resins are being tested and evaluated to determine how best to implement this new technology, including resins made from rice and chicken feathers.

No matter when you look at Nursery Supplies, Inc., historically, presently or in the future, you will see that recycling has been a vital part of our company. NSI has taken a leadership role in providing technical solutions to our horticultural partners growing the products in the field. 'Green' is truly more than the color of our logo; it is the driving force to our commitment to the environment in which we live.

Listed volume sizes are slightly smaller than measured volumes to allow for the natural variances in the plastic molding process.

Shipping Tower Counts may vary and are continually being updated.

Sizes, weights, capacities, product and specifications subject to change without notice.
